7.1.2: THE INSTITUTION HAS FACILITIES FOR ALTERNATE SOURCES OF ENERGY AND ENERGY CONSERVATION MEASURES

SOLAR ENERGY AND WHEELING TO THE GRID:

Our institute power saving implementation is done by using solar technology. Energy developers and utilities use solar photovoltaic and concentrating solar power technologies to produce electricity on a massive scale to power in the campus. Our Management has taken following alternative sources in conserving the energy. Our premises is equipped with solar photovoltaic to address climate change issues. Solar PV System is connected to main electricity grid to allow power generated by solar panels.

R.R. Dist. Hyderabad 501 510.

LED- Based Energy Conservation:

LED-based energy conservation was installed where consumption is more, like Principal's Chamber, Labs and Staff rooms. Occupancy LED lights indoor activity within a certain area. They provide convenience and save energy by turning lights off soon after the last occupant has left the room. Occupancy LED must be located where they will detect occupant activity in all parts of the room.

Our institute's buildings are constructed to have more sunlight in day time is one of the advantage to maximize visual comfort or to reduce energy use.
