1. RAIN WATER HARVESTING

Our institute has enabled rainwater harvesting system (RWH) in the campus. Different ways of rain water collected from roof top of the buildings, paved streets, parking lots, sidewalks is sent to storage tank. After the tank is full, the overflow water is sent to recharge pit which improves ground water level. The collected rain water in four numbers of percolation pits of 3m x 3m size each, constructed at all feasible points in the campus recharge ground waste

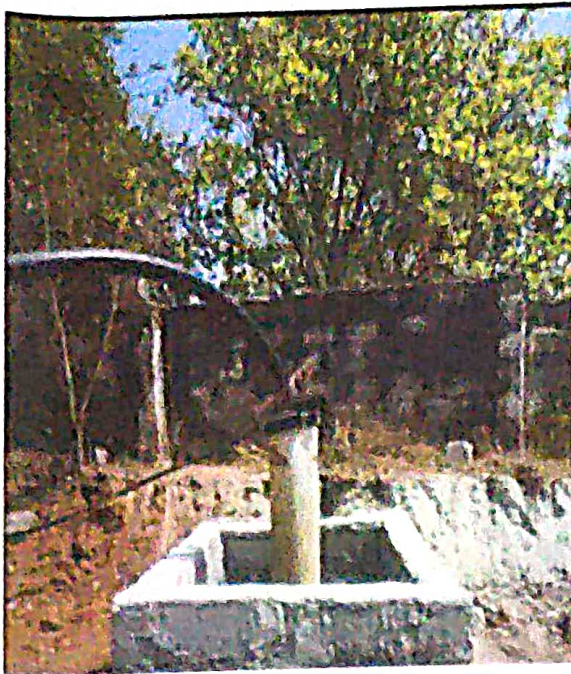

2. BOREWELL ARRANGEMENT

Our institute is continuous bore well water facility to all the purposes, which is placed near to the rain water storage pits since for making availability of water in the bore well round the year no scarcity water problem even in the summer season.

3. CONSTRUCTION OF NATURAL LAKE BUND

Flow of rainwater is stored in Lake Tank. The water from tank is used for gardening, floor cleaning, washing and other external uses.

4. WASTE WATER RECYCLING

A. Anand

R.R. Dist. Hyderabad-501 510.

In our institution a specialized arrangement in waste water utilization, separation of effective reuse of waste water from RO plant is being used for irrigating the green areas. Basically we use recycled water is for flushing of toilets and watering the gardens. Our own RO purifier plant which is situated on the roof top is having 500 liters capacity. Water is stored in tanks and supplies through motor pump arrangement.

Recycling waste water through RO Plant and treated water storage tank

5. MAINTENANCE AND WATER DISTRIBUTION SYSTEM IN THE CAMPUS

The utilization of precious water like ground water is pumped into storage tanks located at different places in the campus. There are three numbers of overhead storage tanks in the campus. The water is distributed through well laid pipe network. Drinking water after treating in RO plant is supplied through a separate set of distribution pipes and water for all other purpose is supplied through another set of distribution pipes. Complete distribution system supervision by committee to ensure that to avoid leakages and wastages of precious water through joints, valves etc..
